Subject: [#TM-230498] Queensbury Mining

Categories: Application correspondence

Hi Adam

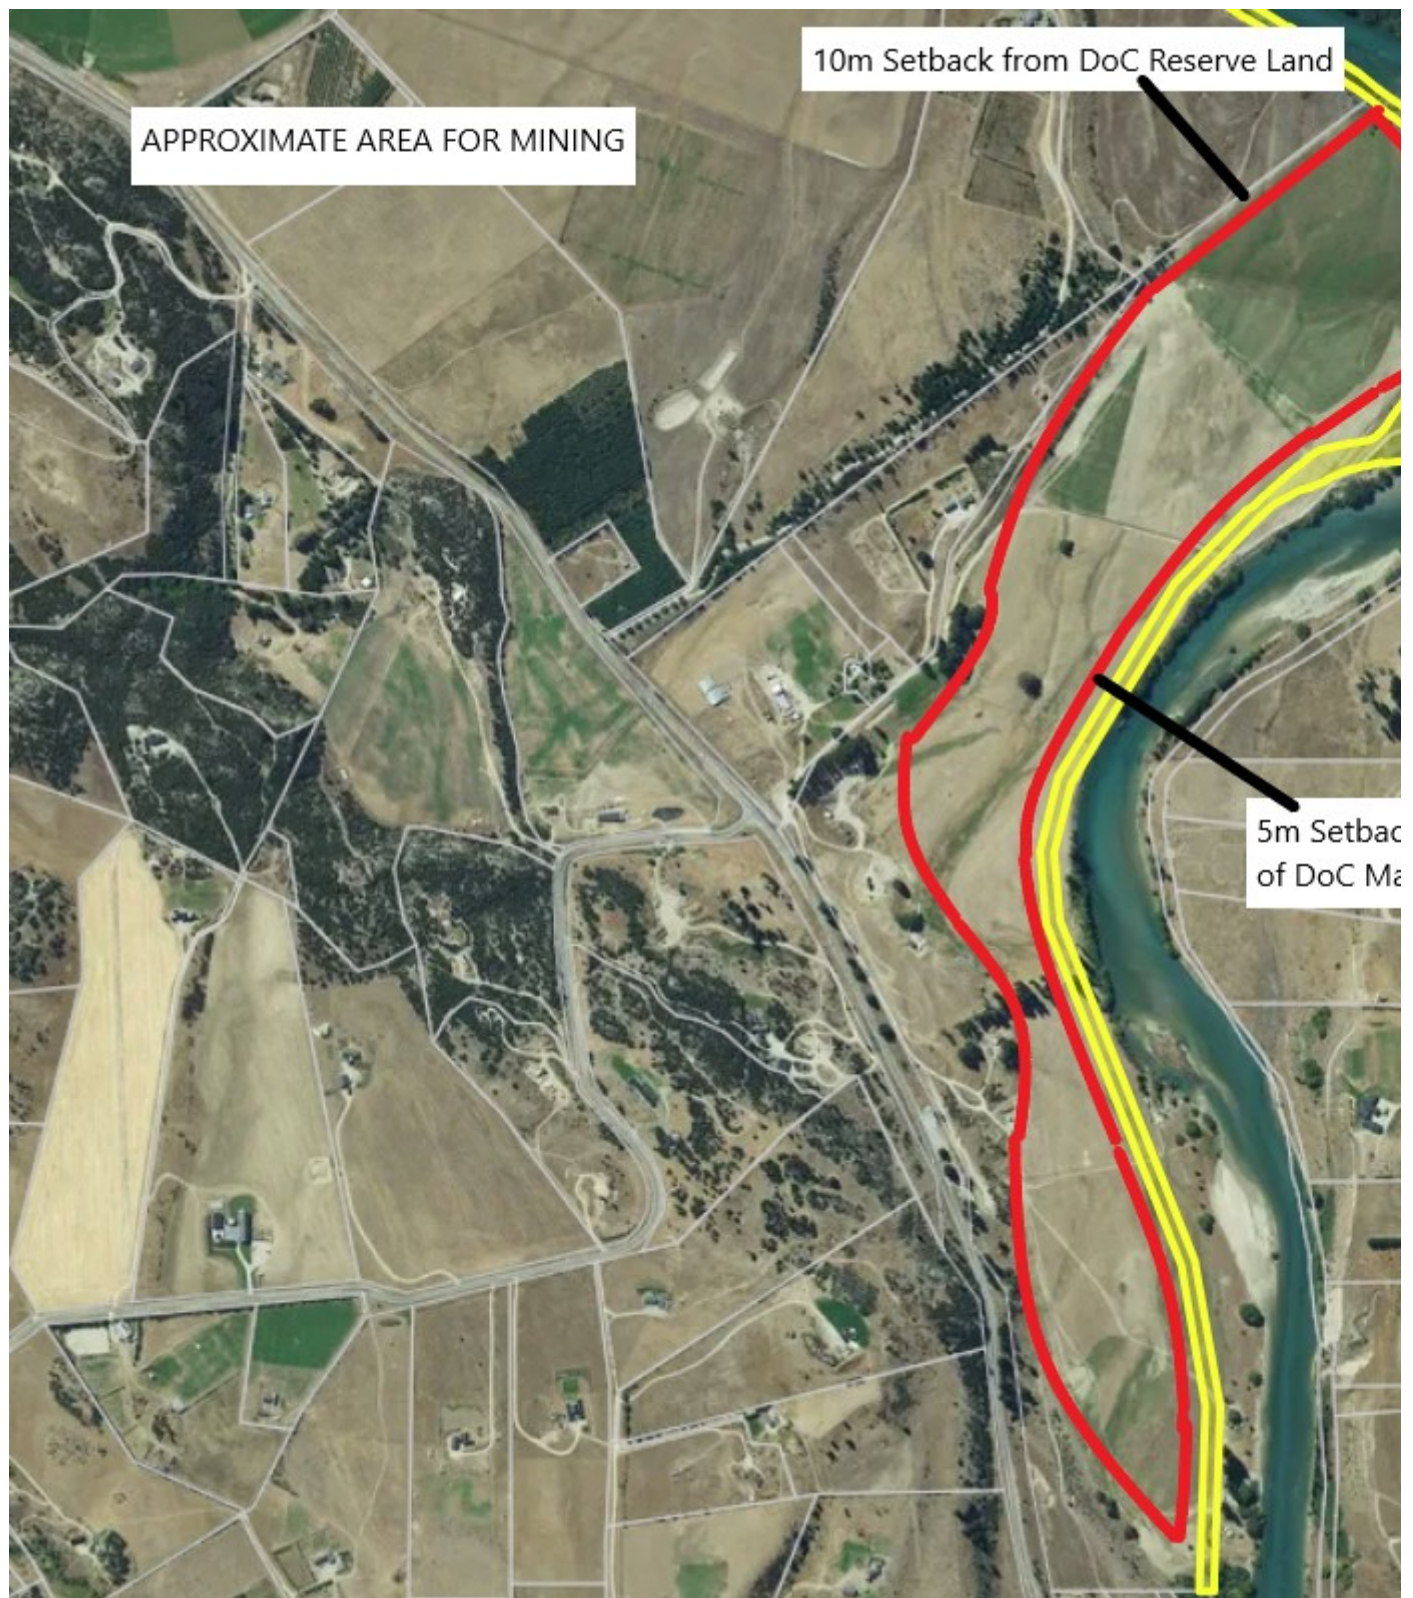

Please find below the area identified for mining.

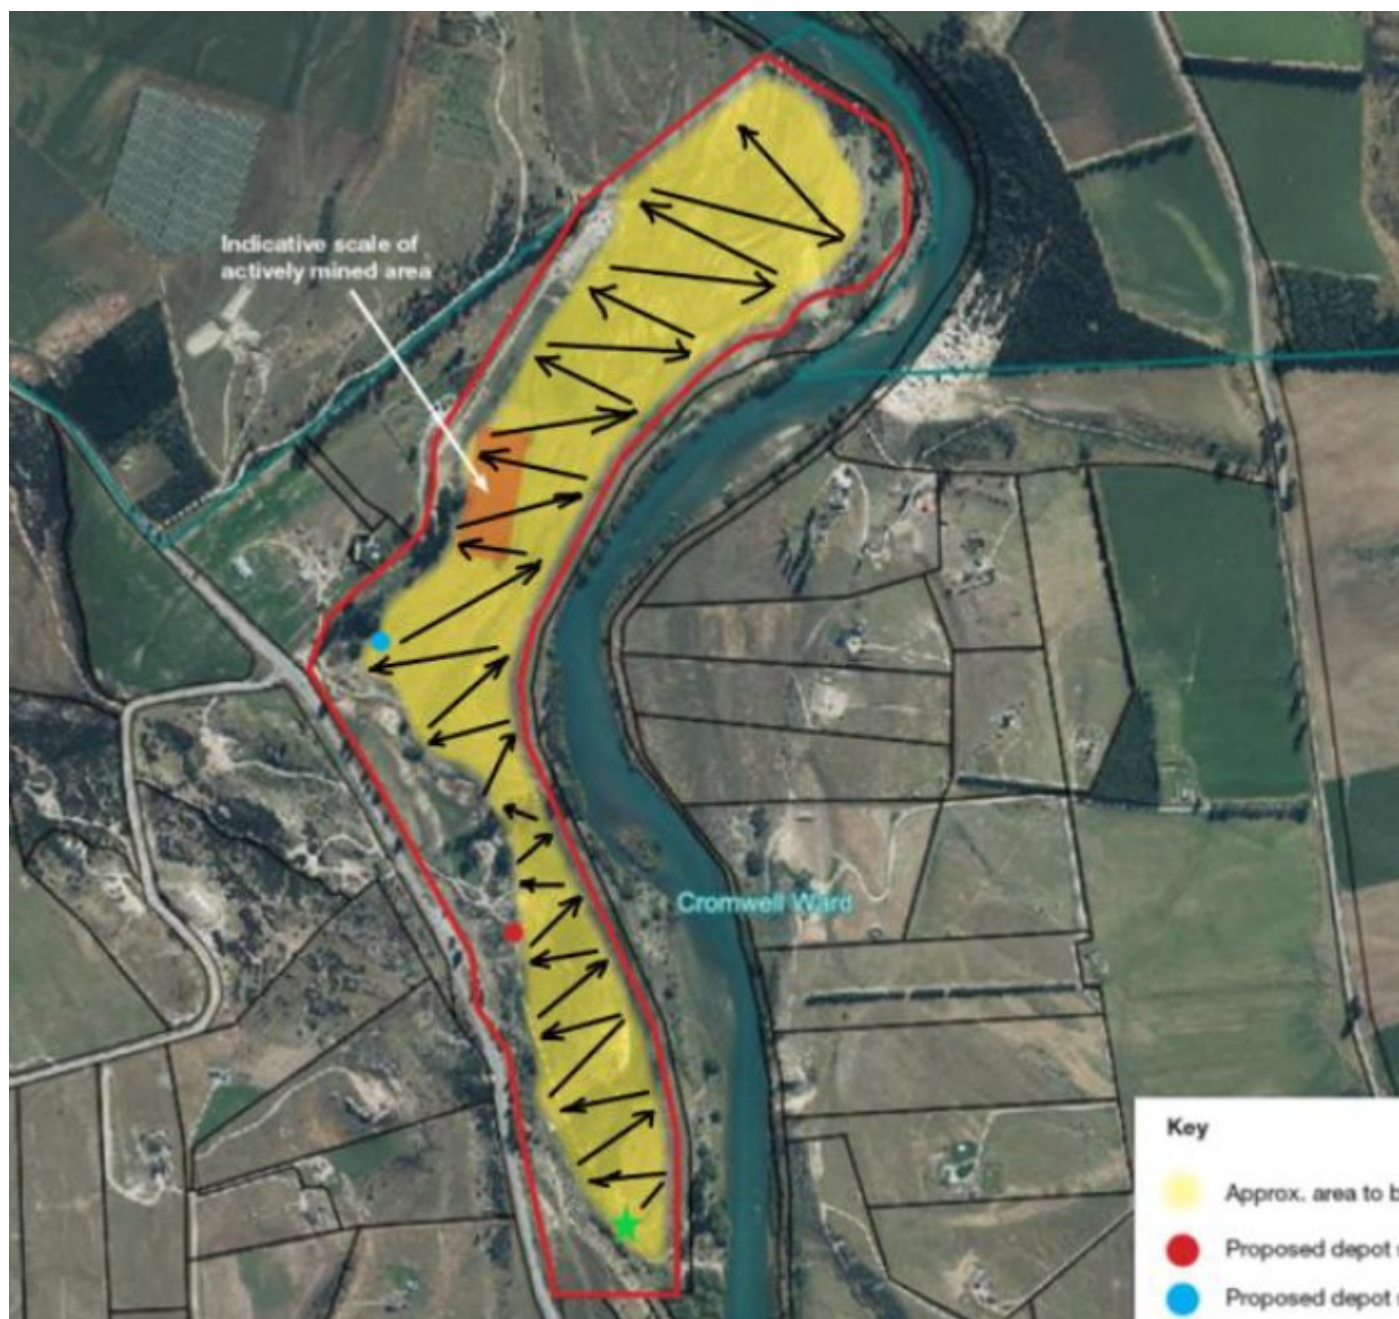

This is consistent with Figures 5 and 6 of the application. For clarity, there will be a 10m setback from the DoC Reserve, a setback to respect the existing indigenous vegetation (with the exception of the a couple of individuals that sit outside the ribbon of kanuka) and a 5m setback against the DoC Marginal Strip. Given the depths to the bottom of the gold bearing gravels, these setbacks will not require any batters or benching.

If you could please move this application forward I would be grateful and I expect to request Limited Notification early next week. I would be grateful for your list of affected parties as soon as practicable.

Thanks

Darryl
